

## FMX launches new terminal block line

*FactoryMation introduces FMX's all new terminal block product line*

**Canton, GA – February 15, 2016** – FactoryMation is excited to announce the recent introduction of FMX terminal blocks. FMX terminal blocks provide a high quality modular, secure, and insulated system for industrial applications.

FMX terminal block relays offer a finger-safe design with a larger wire entry passage. Increased wiring space is provided for ease of installation. In addition, wire stops prevent wire from being inserted too far. A rugged double foot support fits standard DIN rails, prevents breaking, and provides a solid foundation. Screw clamps provide excellent resistance to loosening while captive screws never get lost during installation. A broad selection of terminal blocks are available at an outstanding price. FMX terminal blocks are backed by a 5 year manufacturer's warranty.

FactoryMation is a nationwide top supplier of many quality industrial control products including Enclosures, AC Drives, Motors and Motor Controls, Relays, Sensors, and more.
